

## Bluewater Wireless GPS Lockbox Feature Sheet -2010

The **GPS LOCKBOX KIT** will provide all the hardware necessary to safely secure a Motorola V860 cell phone to a customer's vehicle to be used for GPS tracking as well as voice or text communication. The Kit includes:

### **GPS LOCKBOX**

- Durable ABS Plastic
- Secure Key Locking System
- New Cooling Vents For Closed Box Application
- Installation Hardware Include

### **NAC CERTIFIED WIRING HARNESS**

- NAC Certified
- Eliminates Standard Battery
- Prevents Vehicle Battery Drain
- Automatically turns phone off and on
- Refreshes GPS Software Applications
- Installation Hardware Include

*V860 Close GPS Lockbox*

*Wiring Harness*

### **GPS LOCKBOX**

The GPS Lockbox offers an excellent permanent mounting solution for the Motorola V860. Allowing you to enclose the phone completely preventing access to the phone and it's function. The built-in turn key locking system prevents theft and tampering of the phone.

### **GPS BATTERY ELIMINATOR CONTROL MODULE**

Package with the GPS Lockbox is the new NAC Certified "Battery Eliminator Control Module" wiring harness. This patent pending device is the first and only unit that eliminates the standard V860 battery and replaces it with a battery block that is powered directly from the vehicles battery. This eliminates all charging and battery life issues that may occur throughout the duration of the GPS application.

This new BECM will also power the V860 on and allow it to automatically launch the GPS tracking program when the ignition in the vehicle is turned on. When the ignition is turned off the BECM will turn the phone off within two hours, which allow some GPS software to communicate back to customer that the vehicle is now shut off.

Turning the phone off and on also refreshes the GPS Software, which is recommended by several GPS Software vendors to insure proper operation of their tracking programs.
